

LEV SELECTOR, Ph.D.

New York City, USA | LevSelector777@gmail.com

- <https://www.linkedin.com/in/levselector>

- <https://www.youtube.com/@lev-selector/videos> - AI, 6K+subs,270+vids

- <https://github.com/lselector> - many lectures, tutorials, code examples

- <https://www.amazon.com/s?k=Lev+Selector&i=digital-text> - 4 AI books

SUMMARY:

- AI & Data Science Leader, Ph.D. Mathematical Modeling
- Seasoned AI/ML leader with 15+ years building data and analytics systems
- Deep hands-on expertise across the modern AI stack (LLMs, Agents, RAG, Vector DBs, MCP, and AI-powered applications). Strong mathematical foundation (advanced calculus, probability, optimization)
- Proven track record of building and leading engineering and data science teams across Financial, AdTech, e-Commerce, Media, and Crypto domains
- Full-cycle ownership from architecture to delivery, on cloud (AWS, Azure, GCP) and on-prem
- Core AI/ML: Claude Code CLI, Claude Code SDK, Gemini Ultra, Microsoft Copilot, LLMs, Agents, RAG, MCP, Skills, AI Apps, Transformers, Hugging Face, Ollama, SageMaker
- Engineering: Python, Rust, SQL, ETL, Big Data, APIs, Cloud Infrastructure
- Leadership: team building, hiring & mentoring, cross-functional delivery

PROFESSIONAL EXPERIENCE:

Oct 2024 - present - Vareto LLC (<https://vareto.com> - Enterprise FP&A SaaS Platform)

- Senior AI Engineer / AI Architect
- Architected and built AI-powered features for Vareto's enterprise financial planning SaaS platform, accelerating product capabilities through hands-on AI development and vibe coding workflows powered by Anthropic Claude
- Designed and deployed an autonomous AI Agent embedded within the SaaS application - built on Anthropic Claude - enabling intelligent automation of financial planning and reporting tasks previously requiring manual analyst effort
- Built AI-enabled ETL pipelines leveraging Anthropic Claude to intelligently parse, interpret, and transform complex Excel financial models and reports, dramatically reducing data onboarding friction for FP&A teams
- Leveraged Claude Code CLI, Claude Code SDK, and Microsoft Copilot as primary AI coding assistants to accelerate full-cycle development across the stack, combining Rust and Python for high-performance backend services; utilized Claude Code CLI as a runtime execution engine for automating development and deployment workflows
- Integrated Gemini Ultra (2M context window) for large-scale log file analysis, enabling deep inspection of high-volume production logs that would otherwise exceed standard context limits
- Contributed to AI architecture decisions, establishing patterns and best practices for Anthropic Claude integration within a production SaaS environment, including model selection, prompt design, and agentic workflow orchestration

Feb 2024 - Sep 2024 - RSM US (<https://rsmus.com> - Top 10 U.S. Audit & Consulting Firm)

- AI Architect, Audit Automation
- Pioneered AI solutions for audit automation at one of the largest U.S. assurance firms, directly contributing to RSM's broader strategic AI transformation now backed by a \$1B investment
- Audited RAG-based (Retrieval-Augmented Generation) systems built using LangChain and OpenAI APIs and Anthropic and AWS Bedrock to intelligently query documentation, policies, and regulatory guidelines, significantly reducing research time
- Developed an LLM-powered pipeline to automatically generate structured audit workflows and Visio process diagrams from unstructured audit documentation, replacing hours of manual diagram creation
- Designed FastHTML web application serving as the front-end interface for AI audit tools, enabling non-technical auditors to interact with LLM capabilities directly
- Stack: Python, OpenAI API, LangChain, Anthropic Claude, AWS Bedrock, Microsoft Copilot, RAG, Hugging Face, FastHTML, Statistics, ML

Nov 2022 - Sep 2023 - BixBeta (Startup), CTO & Co-Founder

- AI-enabled crypto accounting and payment/donation SaaS framework
- Generative AI to add Natural Language Interface to analytics and reporting
- Stack: Python, AWS, PostgreSQL, OpenAI API

Nov 2020 - 2022 - Redapt, Data Science Practice Lead

- Building, training, and Leading a team of data scientists
- Data architecture in the cloud (Azure, AWS, Google), Apache AirFlow, ADF, SQL Data Warehouse
- Hands on Machine Learning modeling in the cloud (Azure ML Studio, Synapse Analytics, Cognitive Search, Python, predictive modeling, regression, classification, time series forecasting, anomaly detection)

Feb 2020 - Nov 2020 - Selectorweb Inc., consulting projects

- National Debt Relief (<https://www.nationaldebtrelease.com>) Machine Learning and ETL in production
- Provisions Group (<https://provisionsgroup.com>) Machine Learning with AWS SageMaker and R
- Vara (now <https://vareto.com>) Data Integration for analytics

Dec 2019 – Feb 2020 - Head of Machine Learning And AI, Digital Labs, Capco

Built, trained and managed a team of data scientists, hands on modeling using Python, AWS, Linux VMs, Mainframe Test Automation project using Python, GnuCOBOL, libFuzzer, antlr4, Neo4j

Dec 2018 – Sep 2019 - VP of Data Science, Head of Analytics - National Debt Relief, LLC

Built, trained and managed a team of data scientists. Built data processing and analytics systems on Azure cloud (Linux, DBs, python) to run hundreds of jobs. Used Salesforce Einstein and Jupyter for dashboarding.

Jun 2018 – Dec 2018 – Senior Data Scientist at Vanguard Group via Tata Consulting Services

ML & AI, data migration into the cloud (AWS), deployment. Anomaly detection. Trained the team.

Jun 2017 – Jun 2018 – Selectorweb, consulting projects (Clients: Galvanize, SaleZoom, JKCF)

Machine Learning, AI, Analytics, Python, Scikit-Learn, NLTK, Pandas, Numpy, AWS, Google Cloud, IBM Watson

Nov 2014 – Jun 2017 - Penguin Random House, Consultant – Building systems in Business Intelligence &

Analytics, Big Data Collection and Integration across multiple business groups, Machine Learning & AI. Python, pandas, Netezza, SQL, Redis, AWS, Linux. Built high-volume parallel web scraping at ~2 Mln pages/day.

Apr 2012 - Apr 2014 – AppNexus, Inc, Consultant, Financial Data Analytics - Built a billing and analytics

system processing 60TB/day across 2000 clients (43 thousand lines of python code, self-recoverable ETL processes, health-monitoring, auto-back-testing). MySQL, Vertica, Linux, Python. anaged a team of developers.

1994-2012 - multiple "Wall Street" consulting projects (16 years):

Goldman Sachs, Morgan Stanley, JPMorgan Chase, Citigroup, Merrill Lynch	Waterhouse Securities, CantorFitzgerald/Espeed, CSFB, HSBC, WorldQuant
--	---

Data Processing and Analytics using Unix, Perl, SQL (Sybase, DB2, MySQL), data preparation, data load/migration, ETL, Web design (HTML, CSS, Javascript), C/C++, Java, Jython, Excel VBA

1991-1994 Columbia University. Staff Associate - Mathematical modeling of dynamics of organic molecules. Distributed calculations (unix, C/C++), analytics and graphics using IGOR software on Mac.

1981-1991 National Cardiology Research Center, Moscow, Russia. Researcher - Real time data acquisition and computer processing in neuro-physiological experiments. Pattern recognition, classification, computer simulations of nerve impulse generation and propagation along C-fibers. Partial differential equations, Hodgkin-Huxley model, Crank-Nicolson, modified Runge–Kutta methods. Hardware/software design of medical equipment.

EDUCATION:

- 1988 Ph.D. in Mathematics (modeling of nervous coding), Moscow Institute of Physics and Technology
- 1981 MS in Automation, Moscow Institute of Physics and Technology (MIPT), majoring in computers, electronics and biophysics, Diploma - computer simulation of nerve activity

LICENSES, CERTIFICATIONS, COURSES:

Machine Learning, Deep Learning, Generative AI, Google Cloud). Data Analysis with Python and Pandas. SEC Registered Representative (Series 7, Series 63). CQF (Certificate in Quantitative Finance). Advanced Object Oriented Perl. C++ for Quantitative Finance. Advanced Excel for Financial Applications. Java 2 (Sun)
